PROJECTS [IN PROCESS]

INTELLIGENT BAGGAGE CAROUSEL :

The aviation industry faces baggage handling challenges like mislaid, lost, and damaged luggage. While larger airports have automated systems, many smaller airports still rely on outdated technologies. To address this, we propose a baggage handling system using RFID technology and IoT.

It was powered by cloud computing. RFID enables real-time tracking of baggage, reducing human error and labor, improving efficiency, and enhancing security. This system provides faster baggage sorting, better tracking, and displays the passenger's name on an LCD for convenience. The solution offers cost savings, scalability, and improved passenger experience for airports of all sizes.
